

April 26: Say “No” To Synthetics!

By Montana law, only naturally produced marijuana and marijuana products are legal to sell in a licensed dispensary! Please be aware that there are products in the state that are not sold in licensed dispensaries that are considered “hemp” products. As of May 22, 2023, only naturally produced hemp products may be sold. These products cannot exceed 0.5 milligrams of THC per serving and 2 milligrams per package.

Synthetic marijuana is not a naturally produced product.

These products could also produce intoxicating effects that are not the same as naturally derived THC. Avoid synthetic marijuana products and stick to the marijuana and marijuana products that are natural and thoroughly tested by a licensed lab.
